

Make T&E a part of your plan for growth.

Your checklist for global travel and expense requirements.

T&E takes you everywhere — literally — but as a program, is it reinforcing or restricting your overall growth strategy? Ask yourself these questions to see if your solution is the best way to get your company where you need it to go.

Does your T&E program:

- **Connect to an ecosystem** of targeted apps that keep you on top of the rules, regulations, and requirements that come with global growth — managing everything from passport issues to reclaiming value-added tax?
- **Connect to a network** of travel suppliers and apps around the world, offering efficient scalability as you enter new markets?
- **Offer the flexibility** it takes to meet local requirements and internal policies, ensuring that your long-term strategy works everywhere you go?
- **Manage risk and regulations** everywhere in the world (including emerging markets), so no matter where you want to grow, you have first-hand knowledge of country-specific tax and regulatory requirements?
- **Combine T&E processes** in a single, integrated, spend-management solution that can handle increasing T&E spend as you grow?
- **Connect all your current sites** and seamlessly add new locations, putting consistent T&E processes in place?
- **Integrate T&E data** and integrate with your ERP solution, so as spending data grows, you have it all in one place?
- **Give you a real-time view** into spend, allowing you to forecast budgets with greater accuracy, improve long-term financial planning, and get control of cash flow as you expand?
